## WHEEL ALIGNMENT PROCEDURES

### PRELIMINARY ALIGNMENT INSPECTION

Before checking or adjusting alignment, check passenger and luggage compartments for extra heavy items and remove if present. Ensure fuel tank, radiator, engine crankcase, transaxle/transmission, and differential fluids levels are all correct. Spare tire and manufacturer's jack should also be in place before checking or adjusting alignment settings.

Check tires for abnormal wear and improper inflation. Check steering and suspension linkage for looseness. Bounce vehicle to test shock absorbers and struts and check for abnormal vehicle heights from side to side or front to rear when vehicle is at rest.
